```
The present sequence is the coding region of the nucleotide sequence that encodes human Akt-3. Akt-3 is a third human isoform of Akt, which is also known as protein kinase B (PKB) or "related to A and C protein kinase" (RAC-PK). The gene encoding Akt-3 is located on human chromosome 1, region q43-q44. A human hippocampal EST sequence that showed high similarity to the rat RAC-PKgamma sequence was used to design primers for 3 rapid amplification of cDNA ends (3 RACE). The sequence obtained in the first round of 3' RACE was used to design primers for a second round. The complete sequence was then amplified from human hippocampal cDNA by CR using primers based on the product of the second round of 3' RACE. Akt can inhibit apoptosis induced by detachment from the extracellular matrix. The Akt-3 nucleic acid molecule and protein may be used as matrix. The Akt-3 nucleic acid molecule and protein may be used as Akt-3 protein, and so stimulate apoptosis, may also be used to treat diseases associated with Akt-3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ATGTATGAAATGATGTGGGGGGTTACCTTTCTACAACCAGGACCATGAGAAACTTTTT 1065

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes the regulation of apoptosis, in which the intracellular binding of Akt (a serine/threonine kinase) with Hsp90 (a heat-shock protein) is promoted or inhibited. The present invention also describes: (1) isoforms of Akt and Hsp90, and their partial peptides including the binding domain; (2) antibodies to Akt or Hsp90; (3) DNA encoding Akt or Hsp90 or their partial peptides including the binding domain; (4) expression vectors containing the DNA; (5) host cells transformed by the vectors; (6) production of Akt or Hsp90 or their partial peptides including the binding domain by culture of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, Hsp90 beta, Hsp90 alpha, Akt1, Akt2, Akt3, apoptosis regulation, apoptosis, serine/threonine kinase, heat shock protein; anticancer; cytostatic; cardiant, vasotropic, hepatocropic, neuroprotective, antidiabetic; nootropic, cancer; diabetes, Alzheimer's disease; cell death, radiation; brain ischaemia; cardiac ischaemia; gene; se.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    885
transformed cells; (7) screening compounds for their ability to modify intracellular Akt activity by contact with cells expressing Akt or Hsp90; and (8) drug compositions containing antibodies recognizing the binding domain of Akt or Hsp90 and optionally also an anticancer agent. Akt and Hsp90 have cytostatic, cardant, vasotropic, hepatotropic, antidiabetic, neuroprotective and nootropic activities. Blockade of the binding of Hsp90 with Akt increases the sensitivity of cells to apoptosis induction. Akt and Hsp90 can be used in the prevention and treatment of diseases with which apoptosis regulation is associated, including cancer (such as gastric cancer, ovarian cancer, breast cancer, pancreatic cancer and prostate cancer), diabetes, Alzheimer's disease, cell death caused by radiation or anticancer agents, brain ischaemia or cardiac ischaemia. The present sequence encodes human Akt3 which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      465
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes human Akt-3. Akt-3 is a third human isoform of Akt, which is also known as protein kinase B (PKB) or "related to A and C protein kinase" (RAC-PK). The gene encoding Akt-3 is located on human chromosome 1, region q49-q44. A human hippocampal BST sequence that showed high similarity to the rat RAC-PKgamma sequence was used to design primers for 3' rapid amplification of cDNA ends (3' RACB). The sequence bottained in the first round of 3' RACE was used to design primers for a second round. The complete sequence was then amplified from human hippocampal cDNA by PCR using primers based on the product of the second round of 3' RACE. Akt can inhibit apoptosis induced by detachment from

The present invention describes a composition (CI) which comprises a kinase pathway inhibitor (a) and an anti-prostate cancer compound (b). Also described: (l) identification of a mitogen-activated protein (MAP) kinase pathway inhibitor involving incubating an artivable MAP kinase pathway and selecting the molecules which inhibit the activation of the MAP kinase pathway, and (2) identification of a prostate cancer inhibitor. Involving incubating a cell with hydroxyflutamide and potential inhibitor, and assaying the level of activation of MAP kinase pathway or phosphatidylinositol 3-kinase (PISK)/Akt kinase pathway. Cl has cytostatic activity, and can be used as a MAP kinase pathway or phosphatidylinositol 3-kinase (PISK)/Akt kinase inhibitor.

Cytostatic activity, and can be used as a MAP kinase inhibitor, and androgen receptor (AR) inhibitor. Cl can be used in the treatment of prostate cancer; for identifying a MAP kinase pathway inhibitor; for identifying a prostate cancer inhibitor; and for reducing the number of prostate cancer cells in a sample. The composition Cl provides effective combination thereby as compared to prior therapies. The present sequence encodes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          715
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to an Akt3 inhibitor, where the inhibitor is an antisense molecule capable of inhibiting the expression of human Akt3. The Akt3 inhibitor is useful for preparing a medicament for modulating cell proliferation and for treating tumours, cancers, atherosclerosis, psoriasis, autoimmune diseases, bacterial infections arviral infections like human immunodeficiency virus 1 (HIV) infections wheparitis. The present sequence is the human Akt3 cDNA. Akt3 is also known as protein kinase B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATGAAGATTCTGAAGAAGAAGTCATTATTGCAAAGGATGAAGTGGCACACACTCTAACT

```
The present sequence encodes a human protein kinase B gamma (PKB) polypeptide. PKB is activated by insulin or insulin growth factor 1. Lipid products of phosphoinositide 3-kinase act in insulin signalling by binding to pleckstrin homology domains of PKB. PKB polypeptides any be used as a source of probes and primers. PKB polypeptides are used to raise antibodies, which are used in diagnostic assays. The polypeptides are also useful for screening for compounds which affect insulin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         654
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  714

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1065
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present invention describes test compounds (i.e. small molecules, peptides or antibodies) that can bind to and modulate the activity of these differentially expressed membrane-bound polypeptides, where binding is detected by a competition binding assay, immunoassay or yeast two-hybrid assay. Accordingly, pharmaceutical compositions can be developed and used via gene therapy, to treat aberrant vascularisation, atherosclerosis, thrombosis, coronary artery disease, hyperlipidaemia, dyslipidaemia, high blood pressure or heart failure. As such, they exhibit cardiant, thrombolytic, anticoagulant, antilipaemic, hypotensive and cardiant activities. This polymucleotide sequence is a human DNA molecule that is differentially expressed in a patient with a cardiovascular disorder, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  780

                                                                                                                                                                                                                                                                                                             DNA encodes a rac gamma Ser/Thr protein kinase RAC-PK-gamma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying a compound for treating a cardiovascular or thrombotic disorder by combining a compound to be tested with e.g., a 9380, 9462, 8701 or 2419 polypeptide or with a host cell expressing the polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a novel compound that is capable of treating carditovascular or thrombotic disorder. Specifically, it refers to the identification of nucleic acid molecules, and the encoded proteins thereof, which are differentially expressed in cardiovascular disease
                                                                                                                                                                                                                                                                                                                                        human; gene; ds; cardiovascular disorder; thrombotic disorder; differential expression; gene thorapy; aberrant vascularisation; atherosclerosis; thrombosis; coronary artery disease; hyperlipidaemia; dyslipidaemia; high blood pressure; heart failure; cardiant; thrombolytic; anticoagulant; antilipaemia; hypotensive; cardiant; rac gamma Ser/Thr protein kinase; RAC-PK-gamma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1539
dermatological, immunosuppressive, antiniflammatory; antibacterial, antivital; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an OREX-associated disorder. The mucleic acids can be used to express OREX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID) AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic annemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes a human Akt3 protein. Expression of Akt3 prevents apoptotic cell death induced by apoptotic stimulating kinase 1 (ASK1). The Akt3 polypeptide is useful for inhibiting cell death, preferably in a cardiac myocyte, resulting from hypoxia, apoptosis or necrosis in a patient suffering from myocardial infarction or ischemia reperfusion injury. The polypeptide is also useful for treating myocardial infarction or ischemia reperfusion injury, where the reperfusion injury is myocardial ischemia reperfusion injury or is associated with stroke, liver damage, renal failure, organ transplantation or coronary artery by pass grafting

```
The invention relates to human Akt3 protein (AH/PH-domain containing serine/threonine kinase, Akt) comprising a fully defined sequence serine/threonine kinase, Akt) comprising a fully defined sequence (AAG78018) of 465 amino acids, its splice variant or allelic variant, where the encoding polynucleotide hybridises under stringent conditions with a nucleic acid containing a uncleotide sequence (AAH79025) of 1570 base pairs defined in the specification. Akt3 has cerebroprotective, corrective, corrective, and inhibitor of apoptosis and/or apoptosis and chaptotrophic activity, as an inhibitor of apoptosis and/or apoptosis of stimulating kinase 1 (ASK1)-induced cell death. Akt3 operably linked to a cereplatory region is useful for inhibiting cell death in cardiac mycocytes cregulatory region is useful for inhibiting cell death in cardiac mycocytes regulatory region is useful for inhibiting cell death associated infarction or ischaemia reperfusion injury, particularly that associated with stroke, liver damage, renal failure, organ transplantation or coronary artery bypass grafting Agonist of Akt3 activity during treatment of patients suffering from mycoradial infarction or ischaemia reperfusion injury and inhibitors of Akt3 activity during treatment of patients suffering from mycoradial corrects cells from apoptosis. Gene therapy using Akt3 reduces the corrects cells from apoptosis. Gene therapy using Akt3 reduced to patients with existing heart failure, gene therapy with Akt3 retards the process of ventricular dilation and slows down disease progression. Akt3 death by anonyone is useful for treating other disease states, involving cell death by anonyone is successed the adverse second cell failure.
                                                                                                                                                        cerebroprotective; nootropic; neuroprotective; antiarthritic; osteopathic; vasotropic; hepatotrophic; inhibitor of apoptosis; ASK1; apoptosis stimulating kinase 1; hypoxia; necrosis; myocardial infarction; ischaemia reperfusion injury; stroke; organ transplantation; coronary artery bypass; tumour cell survival; gene therapy; Alzheimer's disease; osteoarthritis; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding human Akt3 protein, useful for inhibiting or death and treating myocardial infarction, ischemia reperfusion injury associated with stroke, liver damage and renal failure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1570 BP; 553 A; 267 C; 358 G; 392 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is that of cDNA coding for human Akt3 (see
AAB1996), a novel Akt isoform. Akt3 is a serine/threonine protein kinase
capable of inducing vascular endothelial growth factor (VECF) expression.
The sequence was deduced from 2 cDNA clones isolated from a human heart
c DNA library using a human Akt3 partial clone as probb. Akt3 is shorter
c CDNA library using a human Akt2 (see AAB19998) and there is no
c significant homology between Akt3 and Akt1 or Akt2 at the C-terminus of
the molecules. A claimed method of inducing expression of VEGF in a cell
involves administering Akt1, Akt2 or Akt3, or a nucleic acid encoding
involves administering Akt1, Akt2 or Akt3, or a patient suffering from an
ischaemic condition, especially creebrovascular, renal, pulmonary, limb
or myocardial ischaemia, or ischaemic, idiopathic or hypertrophic
c ardiomyopathy. The result is beneficial collateral blood vessel
cormation. A claimed method of inhibiting angiogenesis in a patient
c suffering from a tumour, comprises inhibiting the level of Akt activity
c n the patient, thereby inhibiting production of VEGF. The method
comprises introducing an Akt antisense uncleic acid, an intracellular
c binding protein (e.g. a scFV) that specifically binds the Akt protein, or
a nucleic acid encoding a dominant negative form of an Akt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                590
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a mutant Chrysosporium strain comprising a nucleic acid sequence encoding a polypeptide of interest. A mutant Chrysosporium strain is useful for producing a polypeptide of interest by culturing a mutant Chrysosporium strain under conditions permitting expression of the protein or polypeptide, and recovering the subsequently produced polypeptide of interest. The conditions further permit secretion of the protein or polypeptide of interest. The polypeptides are useful for hydrolysing beta-glucosidic bonds. A polypeptide is useful for hydrolysing beta-xylosidic bonds. The present sequence represents human Chrysosporium associated DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           770

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GAGGTGTTAGAAGATAATGACTATGGCCGAGCAGTAGACTGGTGGGGGCCTAGGGGTTGTC 1086
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method for treating, preventing or ameliorating pathological conditions associated with dysregulation of the finalin signaling pathway (ISP). The method comprises administering to a subject a modulator for ISP-regulated proteins or a pharmaceutical composition comprising the described modulator. The method is useful for treating, preventing or ameliorating pathological conditions associated with dysregulation of the ISP such as Type II diabetes or Type A syndrome of insulin resistance. The present sequence is a human homolog of a brosophila gene regulated by ISP. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in sequence. Health from USPTO at sequence contained in sequence. Luspto.gov/sequence.html?DocID=20050085436.

               The present invention describes a composition (C1) which comprises a kinase pathway inhibitor (a) and an anti-prostate cancer compound (b). Also described: (1) identification of a mitogen-activated protein (MAP) kinase pathway inhibitor involving incubating an antiandrogen or a library of molecules with a cell containing an activable MAP kinase pathway and selecting the molecules which inhibit the activation of the MAP kinase pathway; and (2) identification of a prostate cancer inhibitor involving incubating a cell with hydroxyflutamide and potential inhibitor, and assaying the level of activation of MAP kinase pathway or phosphatidylinositol 3-kinase (PI3K)/Akt kinase pathway. C1 has

cytostatic activity, and can be used as a MAP kinase inhibitor, phosphatidylinositol 3-kinase (P13K)/Akt kinase inhibitor, and androgen receptor (AR) inhibitor. Cl can be used in the treatment of prostate cancer; for identifying a MAP kinase pathway inhibitor; for identifying a prostate cancer inhibitor; and for reducing the number of prostate cancer calls in a sample. The composition Cl provides effective combination therapy as compared to prior therapies. The present sequence encodes chicken serine/threonine protein kinase (aktl), which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ORIGIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              요
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
               /notes="Organ: Brain; Vector: pYX- Asc; Site 1: EccR I; Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agazos gel. First strand cDNA was size fractionated on a 1% agazos gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, diseated with NotI and then cloned directionally into pYX-Asc vector. The library tag sequence located between the Not I site and the polyA tail is TGAGAGGCC. This library was created for the University lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of America Health (NIMH), Hemin Chin, Ph.D.,
